

37. (Added) The apparatus of claim 32 wherein said primary-side circuitry includes a primary winding of a transformer and said secondary-side circuitry includes a secondary winding of said transformer said windings being galvanically isolated.

38. (Added) The apparatus of claim 32 wherein said communicators comprise windings and said control information is passed by electromagnetic coupling between them.

39. (Added) The apparatus of claim 38 wherein said coupling is achieved without a permeable core linking said windings.

40. (Added) Circuitry comprising  
two cooperating subcircuits mounted respectively on two separate substrates, the two subcircuits being mounted generally parallel and in close proximity,  
a set of conductive terminations arranged along a termination edge of said circuitry for mounting said circuitry on a circuit board, said conductive terminations including a first set of conductive terminations mounted along a termination edge of one of said substrates, and a second set of conductive terminations mounted along a termination edge of the other substrate, each conductive termination of the first set having no corresponding conductive termination of the second set lying immediately opposite it.

41. (Added) The circuitry of claim 40 wherein the first and second sets of conductive terminations respectively occupy non-overlapping segments along the length of the termination edge of the circuitry.--

#### REMARKS

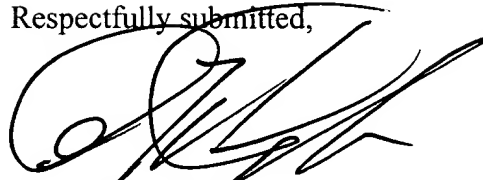

Claims 1-12 and 15-24 have been cancelled from the application and claims 31-41 have been added. Accordingly, claims 13-14 and 25-41 are presented for examination. No new matter has been added.

Applicant submits that all of the claims are now in condition for examination, which action is requested. Filed herewith is a check in payment of the excess claims fees required by the above amendments. Please apply any other charges or credits to Deposit Account No. 06-1050.
